

## F-Secure Mobile Solutions

Installation and activation of F-Secure's Mobile Solutions

To install F-Secure Mobile Security or F-Secure Mobile Anti-Virus into your smartphone, please use following instructions:

NOTE: If you have a previous installation of F-Secure Mobile Security or F-Secure Mobile Anti-Virus running on your smartphone, please uninstall it before continuing

1. Ensure that you have a working Internet connection on your smartphone
2. Choose one of the following download options:

A. Downloading the solution using your smartphone's web browser

Open your smartphone's web browser and go to:  
f-secure.mobi and download the version corresponding to your smartphone model

B. Downloading via PC (Use this method if you have installed PC Suite software for Nokia devices or Microsoft ActiveSync software for Windows Mobile devices)

Open your computer's web browser and download the software version compatible with your smartphone from: [f-secure.mobi](http://f-secure.mobi)

[Transferring the file to the device via Nokia PC Suite:](#)

Use the Nokia PC Suite to transfer the installation file (.sis, .sisx) from your PC into your Nokia device.

[Transferring the file to the device via Microsoft ActiveSync:](#)

Use the Microsoft ActiveSync to transfer the installation file (.cab) from your PC into your Windows Mobile device

NOTE: Because the software installs itself into the internal memory of the smartphone, please ensure that there is enough capacity in your device memory (~600 KB) before installation.

3. If the installation does not start automatically, start the installation manually by running the file from the folder you transferred it to in section 2.

4. Answer **OK / YES** to all questions during installation.

NOTE: Some of the devices must be restarted after installation.

5. Symbian devices: Open F-Secure Mobile Security or F-Secure Mobile Anti-Virus by selecting the new application icon in your smartphones menu.

6. Activate the application to enable virus protection.

Answer OK / YES to start the activation.

7. Symbian devices: Select the Internet access point if it is not automatically selected.

8. Establish connection to the update server to get the latest antivirus updates

9. Congratulations, your smartphone's virus protection is now up to date.

#### Processing infected files

When F-Secure Mobile Security or F-Secure Mobile Anti-Virus detects a virus, it is automatically quarantined. If you want, you can delete or release the infected file.

#### Updating the antivirus database

F-Secure Mobile Security and F-Secure Mobile Anti-Virus include an automatic update service which ensures that the antivirus database is always up to date. Whenever you read your email or browse the web using a data connection (such as GPRS or Wi-Fi) the solution automatically checks for antivirus updates.

#### Manuals & Quick Guides

You can find manuals and Quick Guides for all supported smartphones from [f-secure.mobi](http://f-secure.mobi)

#### Technical support

If you are not able to find the answer to a problem in the manual, please visit [f-secure.mobi](http://f-secure.mobi) and select FAQ
