

# F-Secure Mobile Anti-Virus™

## for Pocket PC and Smartphone

### 1. Installing and Activating

**Previous Version** If you have a previous version of F-Secure Mobile Anti-Virus installed, you must close it. Do not uninstall the product, as it will be automatically removed.

**Installing** **To install:**

1. Transfer the .cab installation file to your device.
2. Locate and select the .cab file in File Explorer on your device.
3. Select **Yes** to allow installation.
4. Select **Yes** to agree to the license terms and conditions.
5. After installing the application, you are prompted to restart your device. Select **Yes**.
6. When the installation is ready, you need to activate the product. The product does not protect your device if you have not activated it.

**Activating** **To start the activation:**

1. Select **Yes** on the activation dialog that appears when you switch your device on for the first time after installing F-Secure Mobile Anti-Virus.
2. Select the activation type:
  - To start the evaluation period, select **Free Evaluation** and select **Next**, OR
  - To have the fully licensed version, select **Subscription Number** as the activation type, and select **Next**. Enter your subscription number and select **Next**.
3. Select **Yes** to connect to the update service. The application connects to the update service and submits your subscription number. During the first update, the application downloads a new virus definition database.
4. When the download is complete, a message informs you that the registration was successful and that the application is activated. Select **OK** to finish the activation.
5. After you have finished the activation, scan your device for viruses to make sure it is clean. See the [Scanning for Viruses](#) section for more information.

## Starting the Product

After you have activated F-Secure Mobile Anti-Virus, it starts up automatically every time you turn on your device. If you have selected the manual scanning mode, you need to start the application manually:

1. If you are using Pocket PC, select **Start→ Programs→  Anti-Virus**.  
If you are using Smartphone, select **Start→  Anti-Virus**.
2. Select **Yes** if you are prompted to run a virus scan.

## 2. Scanning for Viruses

F-Secure Mobile Anti-Virus works in the background and scans your files automatically.

1. If a virus is found during the real-time scan, a message is displayed. Select **Yes** to view infected files, or **No** to close the view.
2. The Infections view contains a list of infected files on the device. For each item on the list, the state (quarantined, released) and the name of the infected file are displayed.
3. Select the infected file to view more details about it.
  - If you are using Pocket PC, tap **Details**.
  - If you are using Smartphone, select **Menu→Details**.

## Processing Infected Files

**To process infected files:**

1. In the Infections view, select the infected file to be processed.
2. Select the desired action.
  - If you are using Pocket PC, tap the action button.
  - If you are using Smartphone, select **Menu** and choose the action.
3. You can process the infected files in one of the following ways:
  - **Quarantine** - quarantine the infected file. A quarantined file is locked and cannot harm your device when F-Secure Mobile Anti-Virus is on.
  - **Delete** - delete the infected file. This is the recommended option. The file will be removed completely from your device. To restore the deleted file later, reinstall it or restore it from a backup copy if you have made one.
  - **Release** - release the quarantined file. If you release a file, it will not be locked any more. You access it at your own risk.

## 3. Keeping the Product Up-to-Date

### Automatic Updates

F-Secure Mobile Anti-Virus includes an automatic update service, which means that the virus definition database in the application is updated regularly. Only an up-to-date virus definition database protects your device against the latest viruses. Automatic updates are in use after you have activated the product.

The application requires an active Internet connection for the updates. When a connection to the Internet is available, the application checks when the virus definition database was last updated and downloads new updates if necessary.

### Manual Updates

You can also update the application manually:

1. If you are using Pocket PC, select **Update** from the **Update** menu at the bottom of the main view.  
If you are using Smartphone, select **Updates** on the main view.

2. Select **Yes** to confirm that you want to retrieve the latest update.
3. If a new application update is available, select **Yes** when you are prompted to download it.
4. When the update is finished, select **Yes** to scan your device for viruses. See the [Scanning for Viruses](#) section for more information.

## For More Information

For more information, download the User's Guide for your product (available in English) at <http://mobile.f-secure.com/>.

## Technical Support

If you have questions about the application not covered in the guides or in the online services at <http://mobile.f-secure.com/>, you can contact your local F-Secure distributor or F-Secure Corporation directly.

## Glossary

### Scanning mode

Scanning mode means the type of scanning in use.

### Virus definition database

Virus definition database contains information about viruses. The application uses virus definitions to detect viruses.
